TECHNOLOGY VISIONARY & STRATEGIC TRANSFORMATION LEADER

OUT-OF-THE-BOX TECH PROBLEM SOLVER

With over two decades on Wall Street and a career spanning investment banking, cartography, and corporate risk, Labro is known for tackling complex issues head-on—whether building AI-enhanced modeling tools or designing algorithmic frameworks for decisioning. His approach turns bold ideas into actionable roadmaps that reshape how organizations operate in an increasingly intelligent world.

INNOVATING ENTERPRISE PLATFORMS

Labro's leadership at JPMorgan Chase and Wells Fargo has shaped how financial institutions approach transformation. As Head of the Innovation Lab at Chase's Commercial Bank, he pioneered AI-driven underwriting, loan pricing, and sales enablement strategies. At Wells Fargo, Labro led the architecture and operations of a counterparty risk platform, improving computational speed, data quality, and operational transparency. He introduced anomaly detection using knowledge graphs, built strategic roadmaps, and represented the platform to regulatory boards.

More recently, Labro has developed AI Agentics that sit atop existing enterprise systems—intelligent overlays that enhance decisioning, automate processes, and expand the functionality of legacy platforms without requiring re-architecture.

STRATEGIC ADVISOR FOR TECH-FUELED GROWTH

Labro's experience spans product strategy, platform engineering, and regulatory compliance—with a growing focus on AI integration and machine learning deployment. He's built digital roadmaps that cut IT costs by 60%, doubled decisioning rates, and transformed legacy systems into seamless digital experiences. At OSLA, he brings this expertise to law firms seeking to modernize operations, build scalable tech solutions, and harness the potential of intelligent automation.

AI PRACTITIONER AND LIFE-LONG LEARNER

Labro holds an MS in Applied Mathematics and has completed postgraduate work in AI, data science, machine learning, and product strategy. His ongoing research explores next-generation AI interfaces, autonomous workflows, and system-to-agent interaction models. He's a lifelong learner, published innovator, patent holder, and contributor to high-tech industry forums—
